Foreword by **Tim Sell**, Managing Director of International Security Training Academy

The security industry fulfils operational needs that support private organisations and government agencies. The availability of well-trained and equipped personnel contributes to safer communities and the protection of people, assets and information. For security personnel to provide quality service they need to have the correct underpinning knowledge across various job roles and situations. To that end, this handbook sets out standards for best practice in a range of security operations and is an invaluable resource for officers and instructors alike. Having a book focus on the principles, concepts and guidelines of professional security is an asset to every operator, and it's my opinion that this will progress security industry standards in a positive manner.
